T.G.T R&D Dept: the technology of the semi-automatic roulette table

Aristocrat Hyperlink "Cash Express"

**SLOT MACHINES**

Tranchant Gaming Technology distributes video gaming, stepper, poker and multi-games slot machines manufactured by renowned names in the industry, such as Aristocrat, Orion, Universal, Amatic and Franco.

Thanks to the application of international standards to the French market, T.G.T now has the competitive advantage of offering a product portfolio of over 170 models, including over 70 models from Aristocrat, its main partner and one of the largest manufacturers of slot machines in the world. Aristocrat has also awarded T.G.T the distribution contract for its Hyperlink Cash Express system - an extremely attractive, patented, networked Bonus Bank operating system.

Orion Slot Machine

Techni Import Professionnel has been an SFM since 1988 and has just changed names. SFM stands for "Société de Fourniture et de Maintenance", a France-specific category of company that both supplies and services (or maintains) products. Under the chairmanship of Sébastien Tranchant, it now operates under the name Tranchant Gaming Technology (TGT), a name that the company aims to continue to develop in the French market, improving its positioning by means of a four-pronged strategy: extending its range of slot machines; carrying out Research & Development; creating graphic content; and enlarging its operations worldwide. Tranchant Gaming Technology is a high technology-driven company whose clients benefit from its pro-active approach, which involves developing and improving its products on a continual basis.

Sébastien Tranchant, President of Tranchant Gaming Technology

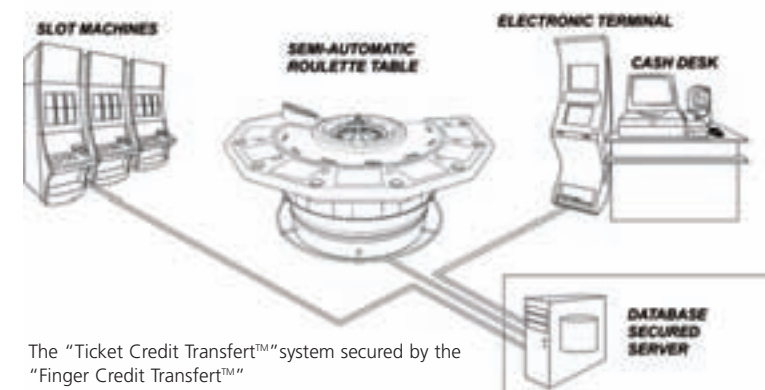

**RESEARCH & DEVELOPMENT**

Tranchant Gaming Technology keeps its Research & Development department extremely busy in order to provide clients with high-tech products and systems.

The semi-automatic roulette table was the fruit of work carried out in the R&D dept. - created thanks to the expertise provided by Caro Développement, the underlying technology was designed and developed by T.G.T.

The R&D department was also responsible for two new patents recently registered by T.G.T: "Ticket Credit Transfert™" (TCT) and "Finger Credit Transfert™" (FCT).

The aim of these two systems, which can be used simultaneously, is to simplify transfers of credits from one machine to another and to make them secure, by means of a single ticket (in the case of TCT) or fingerprints (in the case of FCT); the systems, used in conjunction with a secure personal code, can be used by gamblers for the full duration of their gaming sessions and enable them to gain access their credits.

The "Ticket Credit Transfert™" system secured by the "Finger Credit Transfert™"

## GRAPHIC CONTENT

T.G.T has an in-house graphics creation studio, enabling it to create all types of content, whether employed in the development and customisation of slot machines or for Casinos' general visual client communication needs.

- Vectorial animation: T.G.T provides its clients with a library of drawn animations which are suitable for use with extant machines - several versions of a "payments table" (progressive and non-progressive) are on offer.
- Customised creations: T.G.T supplies made-to-order animations upon request, enabling clients to customise their slot machines.

Vectorial animation

T.G.T. Planetarium film: The Patrouille Tranchant

3D - relief animation

- TV adverts / promotional films / planetarium films: T.G.T produces TV adverts and full-3D promotional films. Moreover, T.G.T also created the 3D films that are shown on the dome of the Planetarium at the Pougues-Les-Eaux Casino.
- 3D / relief films: T.G.T produces animations which enable spectators to view extremely high-quality images in 3D and in relief, without having to wear special glasses.

- Modelling / product design: T.G.T's modelling know-how puts the company in a position to conceptualise and design new products - trim for plasma screens, the semi-automatic roulette table, and various base designs for Caro Développement's tables.

## DEVELOPMENT ABROAD

Far beyond its role as an SFM and its active involvement in the development of Casinos in the French market, T.G.T now aims to expand abroad by offering novel systems to companies in the sector and by potentialising relationships with partners abroad.

In 2007 Techni Import Professionnel has been reborn as Tranchant Gaming Technology - its new visual identity and new positioning will open up new horizons for this dynamic S.F.M. company, under the impulsion of its Chairman, who is constantly on a quest for growth. T.G.T has been strengthened by its entry into new operational areas, and it is now in a position to offer a vertically-integrated range of products and services to all types of companies in the industry and to challenge the major players in the sector.
