

**THE "L" SERIES BILL ACCEPTOR  
CAN BE CUSTOMIZED FOR YOUR  
CURRENCY!**

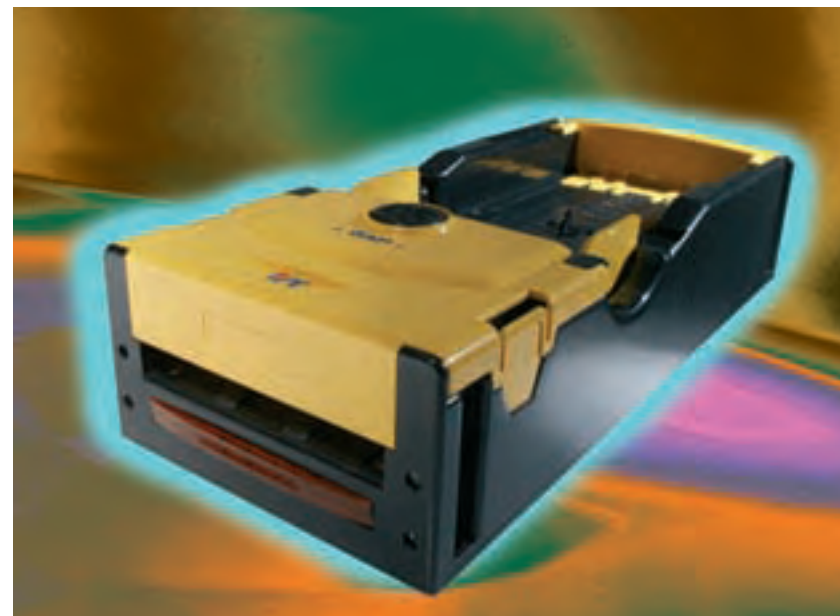

International Currency Technologies, Inc. (ICT) the currency handling pioneer in the design, manufacture and distribution of gaming, amusement, vending, kiosk, and other payment system industries, was established in 1980. In 1985 ICT came out with one of the first bill acceptors, the "HSV-300". The company's philosophy of focusing on innovative products and quality customer service has led ICT to develop a bill acceptor with 4-way acceptance, heralding a period of almost constant growth throughout the company's history. Yuan-Fong Chang, founder and President of International Currency Technologies Corporation, has invested a significant portion of his life and dreams into the company he created. Under his guidance, ICT has grown from a simple manufacturer of amusement and gaming machines into the dynamic, high-tech oriented company

he created. Under his guidance, ITC has grown from a simple manufacturer of amusement and gaming machines into the dynamic, high-tech oriented company that it is today. Many companies strive to treat their employees like family and, under Mr. Chang's guidance, ICT truly exemplifies this ideal. His policies of supporting employees during times of personal, emotional, or medical hardships has been a source of security to many at the company in difficult times. It is this family-oriented approach to corporate culture that motivates ICT personnel to achieve their maximum potential. The success of the company hinges on the success of the team, and the basis of the success of the team comes from the hard work and support of individual employees. ICT's present and future success is directly attributable to this philosophy. ICT has been designing and manufacturing Bill Acceptors, Coin Acceptors, Coin Changers, Note Dispensers, Card Dispensers, Coupon Printers, Hoppers, and Counterfeit Detectors since 1984. As a fruit of this long experience, ICT knows what customers really need and how to offer the best value. Unlike other larger companies that concentrate on high volume orders of standard products, ICT understands the importance of flexibility and is willing and able to make adjustments to products to meet their customers' needs.

In order to extend this philosophy throughout their branch and distributing systems, ICT has service centres throughout the world. In addition to the Asian market, ICT has been cultivating the US and European and markets for years, actively implementing a policy of localization in each area. Because ICT believes that only by becoming involved in localisation could they offer high quality products and better customer service. Accordingly, ICT's branches act not only as sales centres, but also as convenient warehouses and quick service centres for each region.

In 2007, ICT aims to maintain its customary high levels of efficiency, cost effectiveness and customer service. Also in 2007, ICT plans to launch new product lines and its R&D department is totally concentrated on several types of new currency handling systems.

The company takes every possible step to provide customers with products suited to their needs, whether these be existing products, entirely new products or modifications to existing products.

### THE "L" SERIES

ICT's new generation bill acceptor, the "L" Series offers high security, innovative technologies, user friendliness and fast transmission. The unique design of the "L" series allows it to accurately verify need-to-know parts of banknotes, rejecting up to 99% of counterfeit bills. The new anti-pullback function and the latest mechanical technology also prevents "stringing", providing a high security environment. Because of its user-

friendly design, the unit can be removed easily from the bezel without tools, making it ideal for fast and easy transport or for maintenance in busy retail environments.

The "L" Series offers features and functionalities for the most demanding retail applications from gaming and amusement to the kiosk industry.

ICT's "L" Series bill acceptor is equipped with a superior consumer interface, advanced processing technology, and progressive engineering to reject counterfeit bills, while instantly accepting legal

currency without jamming.

According to ICT's Director for Europe, Neil Lu, "Even if we concentrate on the fancy functions of bill acceptors, we must never forget what our customers really need: more efficient and more convenient units. There are no customers who will be satisfied with a bill acceptor equipped with many "unnecessary features"; they want a product with customer-oriented features. To understand our customers and to figure out what we can do for our customers is ICT's basic business philosophy. We never forget what we have promised to our customers. This time, we are ready to show the world how we respect the uniqueness of your currency".

Because of its selectable interfaces and reduced size, the "L" series can be integrated into a wide range of applications. With its constantly busy R&D department, ICT technology continues to advance, and the company doubtless still has many surprises to offer.

ICT believes that the best way to keep customers happy is to offer high quality products, convenience and rapidity. That's the spirits of ICT!
