CASINO SOLUTIONS MADE IN SWITZERLAND

The Magic Table System MTS

Based in Switzerland, one of Europe's most modern and sophisticated Casino backgrounds, CasLife's core business lies in planning, building and operating Casino processes. CasLife, based in Zurich, focuses mainly on the conception and development of solutions for the live gaming sector and Casino operations as a whole.

Internationally, live gaming is facing continuously declining turnover and customer discontent. CasLife's target was to revitalize this struggling sector with new products and solutions - flexible, modern and individually adapted to increase attractiveness and bring life back into gaming. CasLife products not only meet today's needs but also set the trend for tomorrow's exciting games and features.

The Magic Table System MTS solves the problems in Live Gaming - more control - more attractiveness - more revenue. The MTS is a modular built system and is compatible with all types of roulette tables.

"Over the past 10 years, the Casino industry has focused mainly on slot games, neglecting to bring their table games up to the new rhythm of our modern society. Our Magic Table Systems brings new attractiveness to Live Gaming", says Fernando Mutti, CEO of CasLife GmbH.

Fernando Mutti, CEO of CasLife GmbH

For Casinos, the MTS plug-and-play concept is the most cost-effective system to improve their live game.

The freestanding, yet highly-stable light mount solves common illumination problems with unique non-reflective and homogeneous lighting while simultaneously mounting surveillance cameras and a multifunctional display. Not only guests benefit from these lighting conditions and the improved atmosphere: the image quality of existing cameras increases radically.

The heart of this integrated system is the aforementioned MTC. A Magic automated control system that improves table control by a number of features (e.g. accurate detection of the winning number, advanced wheel control, etc.).

This is the platform for the Magic Wheel-Pot and the additional Magic Games and Bonus Features and creates multiple possibilities for multimedia and promotional activities in live gaming. Equipped with a touch screen for the dealer, the MTC enables more efficient and ergonomic table management. Functional issues aside, the multifunctional display serves as a visualization for the Magic Wheel Pot and the Magic Games and Bonus Features, bringing attractiveness and much needed excitement for the upcoming generation of gamers.

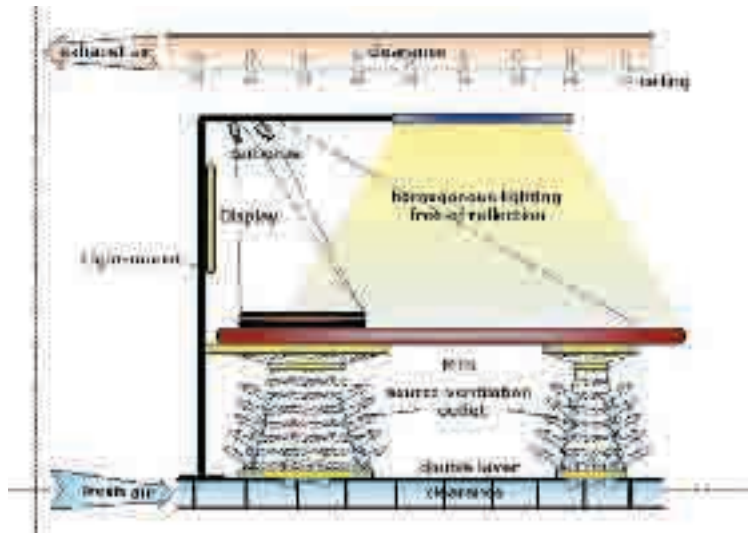

Eugen E. Kirschenmann, Engineering Manager at CasLife and Inventor of the MTS, explained: "Live gaming has lost a lot of its importance, with a lack of attractiveness and a declining turnover. Furthermore, Casinos experience problems such as extensive staffing, etc. Accordingly, many Casinos began to think of the live game as a mere burden. We think live gaming is essential - but it has to be revitalized!

Making live game faster, more thrilling and attractive - appealing to the new generation of gamblers who grew up with computers and Playstations. After all, live gaming is considered rather conservative. We have to bring it closer to slot gaming but without losing its unique "live" character".

Eugen E. Kirschenmann, Engineering Manager at CasLife

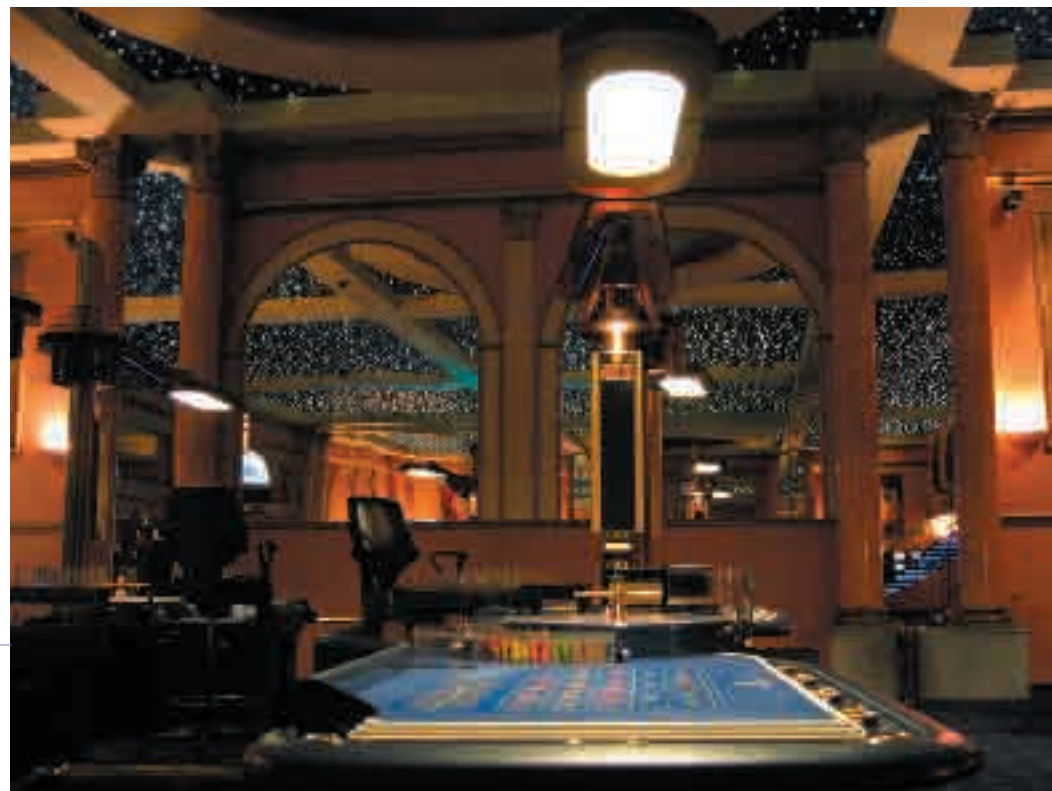

Performance, flexibility, security - bottom line: The MTC guarantees increased table turnover. Finally, Mr. Kirschenmann, explained "The MTS (Magic Table System) with its plug-and-play construction provides a modular and very flexible platform for the future of Live Game floors. Furthermore, our MTC (Magic Table Control System) improves security and increases table revenues. Our Magic Wheel-Pot and our Magic Games and Bonus Features bring more attraction and excitement to the game. We cooperate closely with our customers to meet their individual requirements and yield optimum results with specific jackpots and game combinations. Our system is flexible, open and unique and offers true plug-and-play abilities."

CasLife's entire range of solutions and products sets out to maintain the highest possible level of flexibility. All systems are of modular design and can be adapted to meet all Casinos needs, mentally or ergonomically.

The source condition system is one of the success-stories of CasLife's casino solutions. This system has been successfully installed in over 10 Swiss Casinos and on several international markets for years. This patented air conditioning system smoothly radiates fresh air, free of noise and draughts. The fresh air warms up and rises to the ceiling where the exhaust is removed.

Clear Table source

The substructures of game tables, slot machines and other furniture are used as ventilation outlets. A direct supply of fresh air is granted. This intelligent solution facilitates installation and operation with no need of servicing or interrupting operation when the game floor is re-arranged. CasLife provides the needed expertise and experience for the planning and implementation of these source conditioning systems. The most sophisticated approach to air conditioning - where efficiency meets simplicity. The Bad Ragaz, Mendrisio and Locarno Casinos use the source-condition system and are

working successfully with light mounts. With the highly acclaimed release of the MTS this year, the number of Casinos using CasLife's solutions will rise significantly. "Europe's most modern Casinos are situated in Switzerland. When it comes to gambling regulation, no other country has a legislative system as strict as Switzerland. The experience and knowledge we gathered in order to comply with these laws are now being incorporated into our solutions and products, with a high level of thoroughness and quality", said Fernando Mutti. CasLife establishes sustainable partnerships, providing long-term consultants and accompanying Casinos from planning to realization.
